LipoLite Operative Report

Name: _____

Date: _____

Preoperative Diagnosis: Localized Adiposity

Procedure: Smartlipo

Surgeon (s): _____ Nurse/Medical Asst: _____

Pre-op Blood Pressure: _____/_____ Pulse _____

Allergies: _____

Pre-op Medications: _____

Antibiotic Pre-op dosing: Keflex _____ Ampicillin _____ Erythromycin _____

Additional Intraoperative Medications: _____

Tumescent Anesthesia:	_____ 1000cc 0.9% NaCL	_____ 500cc 0.9% NaCL
	_____ 50ml 1% Lidocaine	_____ 25ml 1% Lidocaine
	_____ 50ml 1% Lidocaine	_____ 25ml 1% Lidocaine
	_____ 10ml 8.4% Sodium Bicarb	_____ 5ml 8.4% Sodium Bicarbonate
	_____ 1ml 1:1,000 Epinephrine	_____ 0.5ml 1:1,000 Epinephrine
	_____ 0.25ml Kenalog-40	

Weight _____(lbs) Weight _____kg X 50 mg/kg = _____max. LC + 1000 _____max liters TAF

Excess adipose tissue removed from the following areas:

Locations(s)	Laser Watts	Volume (ml) RIGHT	Volume (ml) LEFT
--------------	-------------	-------------------	------------------

Total Volume (ml) _____ Total Supranatant Volume _____

Operative Summary:

The patient was consented, prepped and draped in a sterile manner, marked, and then placed on a sterile-draped procedure table. _____blade incisions were made for cannula entry after local infiltration with 0.5% lido with 1:100,000 epi. Areas to be treated were then infiltrated with tumescent anesthesia fluid (TAF) with the above concentrations using a blunt cannula. A total of _____ ml of TAF was infiltrated. LipoLite of the area was performed and the adipose tissue and TAF were then aspirated using a _____mm cannula and with a _____gauge cannula for fine feathering. Incisions were left open. Bacitracin ointment was placed over the incision sites followed by sterile gauze. Combine dressings

was then used to support the treated area(s), followed by a surgical compression garment. The patient tolerated the procedure well. Postop care instructions given.

Postop Blood Pressure ___/___ Pulse ___bpm

Complications: _____

Additional Comments: _____
